

## ATV Spray Contractor Review

Giddy Tony,

Just a quick note to let you know how pleased I am with my QuadCruise (ATV Speed and Spray Control) and to give you a bit of contractor feedback.

As you know, I purchased my unit for a new Honda TRX400FA back in 2004 for boom spraying and fertilizer spreading.

I use a 400 litre gold acres unit with an 8m boom and double side foam markers.

I also use a ground driven 350 litre super spreader which needs to be driven at 15 kph (9 mph) to give the desired 18m spread for 250kg/ha. - something very hard to do given that you start off pulling about 500kg and within 4/5 minutes are down to 100kg, but the QuadCruise takes the pain out of that.

It makes fence lines a breeze with a spot sprayer and lets you swap hands, but its biggest feature is boom spraying!

There is nothing better you can do to a bike to make life easier. Forget about rate controllers - this is the single most useful thing I have ever bought. It would be cheap at triple the price.

Mine is teamed to a Honda pump through solenoids and a dump valve, so when you touch the front brake the whole mix agitates till you touch resume. We are usually using water rates of 100 l/ha and driving at 12kph.

The only thing to wear out in 6 years is the rubber boot on the spray on/off switch.

**A real quality product.**
